

# Aulds Mountain III Wind Project

Natural Forces is proposing to expand the existing Aulds Mountain and Pictou Landing Wind Farms in Pictou County, Nova Scotia. The existing wind farms on Aulds Mountain, commissioned in 2015 and 2017, have exceeded expectations and produced over 110 GWh of clean renewable energy.

The proposed Aulds Mountain III Wind Project consists of up to 12 new wind turbines, in addition to the three operational turbines. The expansion would add up to 50 MW of capacity to continue to make the Nova Scotian electrical grid more sustainable.

This project is located on a mixture of Crown and private lands in Piedmont, 20 km east of New Glasgow.

This project is being proposed by the partnership between Natural Forces and Wskijnu'k Mtomo'taquinow Agency Ltd (WMA), a corporate body wholly owned by the 13 Mi'kmaw bands in Nova Scotia.

## About Natural Forces

Natural Forces is a private, independent power producer based in Halifax, Nova Scotia. We deliver renewable energy projects in partnership with local communities across Canada, the United States and Ireland.

We develop, construct, own, and operate wind, solar, hydro and storage projects with First Nation communities, universities, municipalities, and local community funds.

Over the last 20 years, our team has delivered renewable energy projects on time and on budget, including approximately 300 MW of operational energy projects, with thousands of MW of assets in early, mid and late-stage development across Canada, USA, and Ireland.

We believe that partnering with local communities for these projects not only generates clean and renewable electricity but delivers local economic prosperity and raises awareness of the challenges of climate change.

# Project Updates

- An electromagnetic interference study has been completed for the site, demonstrating no expected impact on telecommunication infrastructure
- The Crown land application has been submitted
- Engagement with WMA and all of the Mi'kmaw bands is ongoing
- The site and environmental conditions are well-known to Natural Forces, having studied the area for the two operational wind farms on Aulds Mountain
