

AULDS MOUNTAIN

Wind Farm Expansion

Who We Are

Natural Forces develops, constructs, owns, and operates wind, solar, and hydro projects across Canada. Our passion is to build projects and relationships that allow us to harness Canada's wonderful and abundant natural resources in an environmentally responsible and cost effective manner. Established in 2001 in Halifax, Nova Scotia, Natural Forces remains a small company with big values and big ambition.

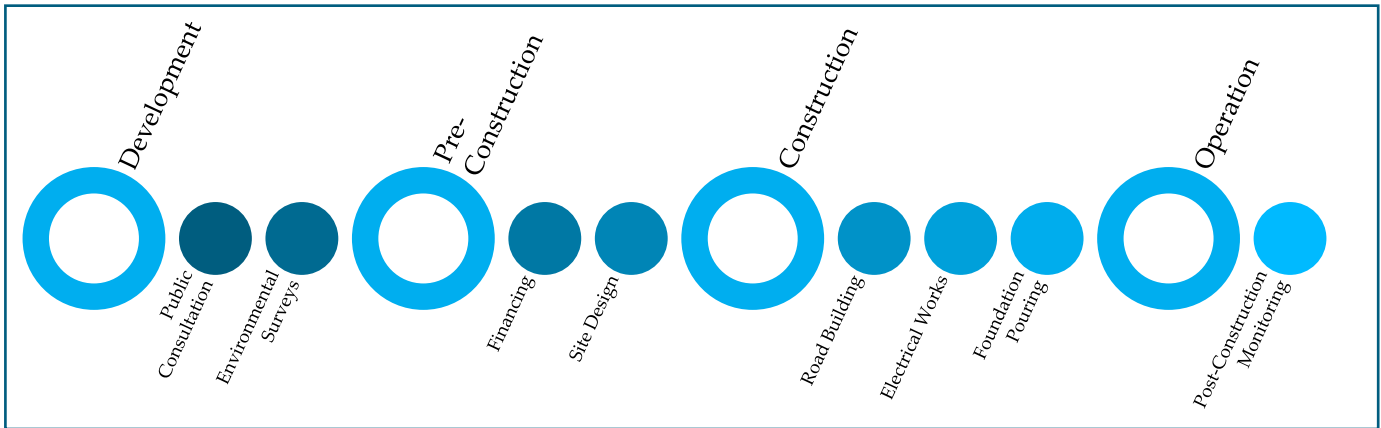

What We Aim To Do

The existing wind farm on Aulds Mountain, commissioned in 2015, has been a great success. Having already produced over 65 GWh of clean renewable energy, it has surpassed our expectations. Because of the impressive wind resource in this area that exceeds, on average, 7.2 m/s, we are looking to expand this site to include up to an additional 50 MW of capacity to continue to make the Nova Scotia grid more sustainable.

General Timeline

The Facts

- There are 3 turbines operated by Natural Forces on site
- We are looking to add approximately 13 turbines
- We plan to use Enercon E-126 4.2 MW turbines
- The average annual wind speed on site is 7.26 m/s
- Predominant wind direction is from the SW
