

Westchester Wind Project

Natural Forces is proposing to develop a wind energy project on Westchester Mountain, Nova Scotia. The Westchester Wind Project would consist of approximately 10-12 turbines with the capacity to produce approximately 50 MW of clean renewable energy. This proposed project would supply enough electricity to power an estimated 11,250 Nova Scotia homes.

The proposed Westchester Wind Project is located approximately 25 km south of Oxford on privately owned lands.

This project is being proposed by the partnership between Natural Forces and Wskijnu'k Mtmo'taquow Agency Ltd (WMA), a corporate body wholly owned by the 13 Mi'kmaw bands in Nova Scotia.

About Natural Forces

Natural Forces is a private, independent power producer based in Halifax, Nova Scotia. We deliver renewable energy projects in partnership with local communities across Canada, the United States and Ireland.

We develop, construct, own, and operate wind, solar, hydro and storage projects with First Nation communities, universities, municipalities, and local community funds.

Over the last 20 years, our team has delivered renewable energy projects on time and on budget, including approximately 300 MW of operational energy projects, with thousands of MW of assets in early, mid and late-stage development across Canada, USA, and Ireland.

We believe that partnering with local communities for these projects not only generates clean and renewable electricity but delivers local economic prosperity and raises awareness of the challenges of climate change.

Project Updates

- An electromagnetic interference study has been completed for the site, demonstrating no expected impact on telecommunication infrastructure
- Engagement with WMA and all of the Mi'kmaw bands is ongoing
- All environmental surveys were completed in October 2021 and the environmental assessment is now being written
